DAY 41 · THEORY HANDOUT

Turn Profile Text Into Clear Fields

Clean a page, extract sections, and combine a checked profile record.

The idea and its useful terms

Clean a page, extract sections, and combine a checked profile record.

Scraping

Reading selected content from a webpage.

Extraction

Copying requested facts into named fields.

Two-pass pipeline

Read small sections first, then combine the fields.

A long profile page can mix menus, repeated words, and several sections. Small section extractions make the source of each fact clearer.

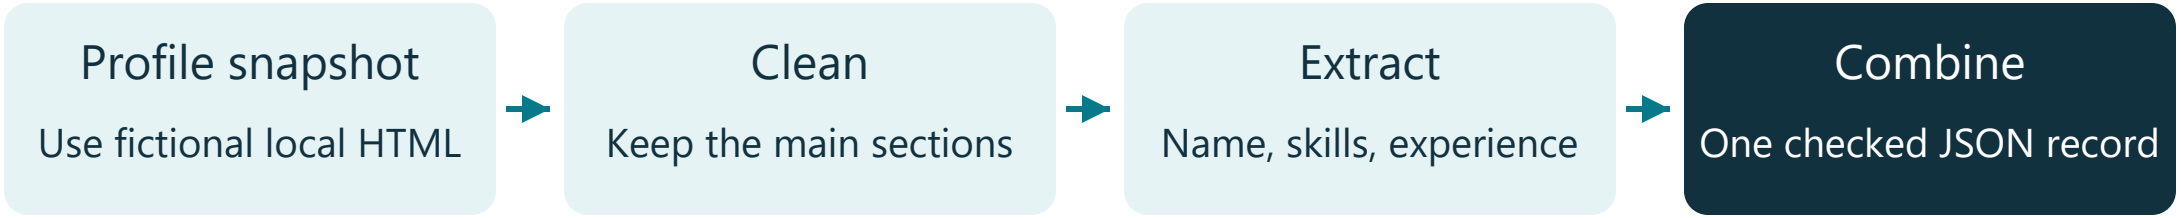

The course shows browser collection from LinkedIn. Our classroom file avoids a login and uses fictional data; live page layouts may need updated selectors.

> A copied profile is source text. It does not give the model knowledge of hidden fields or permission to contact the person.

Follow the work, one step at a time

Each step has a job. We can inspect its output before moving on.

Read the path from left to right.

Each arrow means: pass the result to the next step.

First select the profile's main content and its sections. Clean repeated whitespace without deleting facts. A first pass extracts section facts; a second pass can combine the records into one output schema.

Keep missing fields empty and conflicting fields visible. We use fictional local HTML. The live course workflow collects browser HTML first; changing websites may require new selectors before this extraction path works.

> If the answer is wrong, inspect the input and the intermediate results. The last sentence alone cannot show which step failed.

A small example we can check

The values here are classroom examples. The notebook shows actual results.

About

Asha teaches Python.

Lives in Pune.

Skills

Python, Pandas.

Keep names as written.

Combined record

name: Asha

skills: Python, Pandas

Read the given input first. Point to the fact or value needed for the requested output.

Run the matching example, then try the fresh input at the end of the notebook. Compare both results with the known input.

> A copied profile is source text. It does not give the model knowledge of hidden fields or permission to contact the person.

Choose the setting or tool for its job

A different choice changes the work. These are the choices we compare.

First pass	Second pass	Missing value
Extract each section. Do not add missing facts.	Combine shared fields. Keep conflicts visible.	Use null or an empty list. Do not invent experience.

Read the supplied fictional HTML and extract its main profile sections.

Parse the cleaned profile into a typed record.

> Try a second profile with a missing city. Keep that field empty rather than guessing.

Practice, check, and read the full lesson

06 KGP Talkie

Use the notebook to try the steps. Use the article when you need the longer explanation.

1. Build

Run the small example.

Inspect each step.

2. Change

Try the fresh input.

Keep the goal clear.

3. Check

Compare with the source.

Keep mistakes visible.

Try a second profile with a missing city. Keep that field empty rather than guessing.

Read the complete tutorial breakdown for this section in our KGP Talkie article.

> A copied profile is source text. It does not give the model knowledge of hidden fields or permission to contact the person.
