DAY 42 · THEORY HANDOUT

Extract a Resume Into Checked JSON

Read every page and keep missing or uncertain fields visible.

The idea and its useful terms

Read every page and keep missing or uncertain fields visible.

Resume parser

Reads resume text into named data fields.

Nullable field

A field may contain null when the fact is missing.

Two-stage extraction

Extract first, then check the result shape.

Different resumes use different layouts. A common schema makes the records easier to read and compare without changing the original facts.

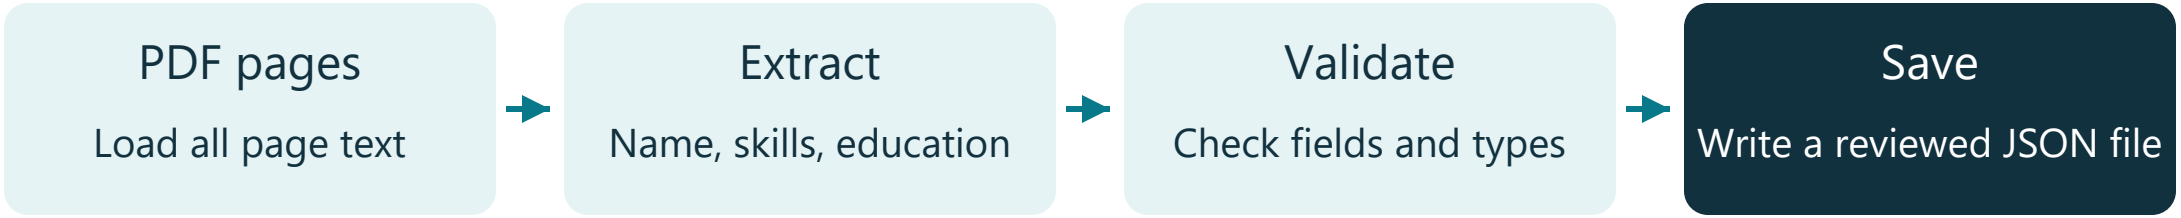

The course uses extraction and a second formatting pass. We also validate in Python. Reformatting cannot prove that every extracted fact is correct.

> A resume record is an extraction result, not a decision about who should get a job.

Follow the work, one step at a time

Each step has a job. We can inspect its output before moving on.

Read the path from left to right.

Each arrow means: pass the result to the next step.

Load every page before extracting name, education, email, and skills. The model fills a declared schema, and Python validates the shape. Compare each value with the PDF text before saving the record.

A second formatting pass can repair an output shape but cannot prove a missing email exists. Use null for absent data. Distinct output filenames keep one resume's record from overwriting another one.

> If the answer is wrong, inspect the input and the intermediate results. The last sentence alone cannot show which step failed.

A small example we can check

The values here are classroom examples. The notebook shows actual results.

Resume text

Mia, Python, Pandas.

Education: BSc.

Fields

name: Mia

skills: [Python, Pandas]

Missing field

No email in the PDF.

email: null

Read the given input first. Point to the fact or value needed for the requested output.

Run the matching example, then try the fresh input at the end of the notebook. Compare both results with the known input.

> A resume record is an extraction result, not a decision about who should get a job.

Choose the setting or tool for its job

05 KGP Talkie

A different choice changes the work. These are the choices we compare.

All pages

Skills may be on page 2.

Do not read page 1 only.

Format validation

Check field shape and type.

Then check source facts.

Output review

Compare each field.

Keep the original PDF.

Load the fictional two-page resume and combine its page text.

Use structured output with nullable missing fields.

> Parse a second resume with different skills. Save both results under separate names and compare with their PDFs.

Practice, check, and read the full lesson

Use the notebook to try the steps. Use the article when you need the longer explanation.

1. Build

Run the small example.

Inspect each step.

2. Change

Try the fresh input.

Keep the goal clear.

3. Check

Compare with the source.

Keep mistakes visible.

Parse a second resume with different skills. Save both results under separate names and compare with their PDFs.

Read the complete tutorial breakdown for this section in our KGP Talkie article.

> A resume record is an extraction result, not a decision about who should get a job.
